

2nd JCI & ACI Joint Seminar
 -Resilience of Concrete Structures-
 (2015.7.13)

Recent Shaking Table Tests of RC Building Model Structures

Hideo Katsumata, Obayashi Corporation

1

Topics

1. 20 Storied Moment –Frame Building Subjected to Long Period and Long Duration Ground Motion

Cooperation Study of Obayashi, Kajima, Kobori, Shimizu, Taisei, Takenaka, and BRI: (2010-2012)
 Project of servicing the architectural standard, Thema 27-1,
 Sponsored by MLIT (国交省)

2. 6 Storied Wall-Frame Building Subjected to Observed Ground Motion at Kobe in 1995

Cooperation Study of Obayashi, Kajima, Kobori, Shimizu, Taisei, Takenaka, Kyoto University, and NIED: (2010-2012)
 Project Title: Special Project for Reducing Vulnerability for Urban Mega Earthquake Disasters, Sub-Pro 2: Maintenance and Recovery of Functionality in Urban Infrastructures, Quantification of Collapse Margins in Reinforced Concrete Buildings,
 Sponsored by MEXT(文科省)

2

View of Specimens

Topic 1: High Rise RC
 MLIT's Project 国交省
 Tested in 2012, Aug.

Topic 2: Low Rise RC
 MEXT's Project 文科省
 Tested in 2015, Jan.

Common Testing Facility
 E-DEFENSE of NIED

3

Aim of Shaking Table Test

- Reproducing of Past Phenomena
 - Response and Damage of Past Buildings for Kobe Earthquake
- Verification Topics 1 and 2
 - Design Codes or Concepts
 - Structural Detailing, etc.
- Finding of New (Future) Phenomena
 - Response and Damage of Current Buildings for Long Period Ground Motions

Topics 2 and 1

4

Contents of Topic 1: High Rise RC

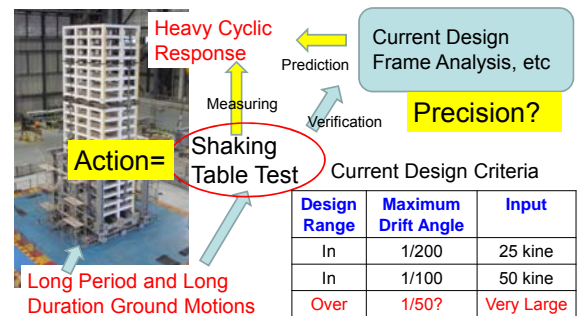

1. Objective 目的
2. Specimen 試験体
3. Input Motions 入力波形
4. Test Results 実験結果
5. Analysis 解析
6. Conclusions まとめ

5

Object

To Grasp Precision of the Current Analytical Methods for Predicting Behavior of High Rise Reinforced Concrete Building Subjected to Long Period and Long Duration Ground Motions

6

Specimen

20 Storied, 1/4-Scaled Model, 3 × 2 spans, Moment-Resisting Frame

Total Height = 15m

Prototype Building:
Designed in late 1990's

High Strength Material:
Concrete: $F_c=30$ to 60N/mm^2
Main Rebar: $\sigma_y=495\text{ N/mm}^2$
Hoop Rebar: $\sigma_y=695\text{ N/mm}^2$

Total Weight: 5000kN approximately
Including Foundation and Protectors
Total Floor Weight: 3600kN approximately
Including Additional Steel Weight

Specimen

Main Bar: D10, D13

Column: 225 × 225mm

Slab Bar: D6

Slab Thickness 80mm

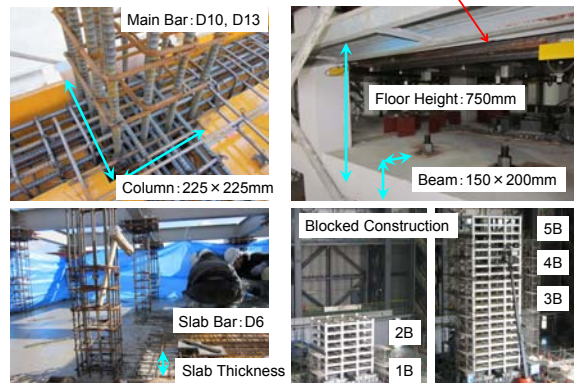

Additional Steel Weight

Floor Height: 750mm

Beam: 150 × 200mm

Blocked Construction

1B, 2B, 3B, 4B, 5B

Shaking Program and Summarized Results

Two Input Waves 3.11 Observed / Nankai Trough Calculated
Three Response Target Level 1, Level 2, and Ultimate
→Magnify Wave Amplitude

Level 1 and 2: Usual Design Range

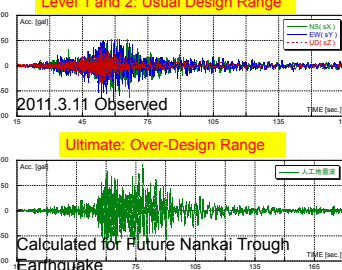

| CASE | MF | Max. Drift Angle |
|------|------|------------------|
| 1-5 | 100% | 1/234 |
| 2-2 | 200% | 1/137 |
| 2-6 | 300% | 1/86 |

MF: Magnification Factor

Ultimate: Over-Design Range

| CASE | MF | Max. Drift Angle |
|------|------|------------------|
| 3-2 | 150% | 1/64 |
| 3-5 | 200% | 1/35 |

Compressed Time Axis (1/2) ... Similarity Law of Scaled Test

Test Results: Damage Inspection

Crush of Beam End

Crush of Column End

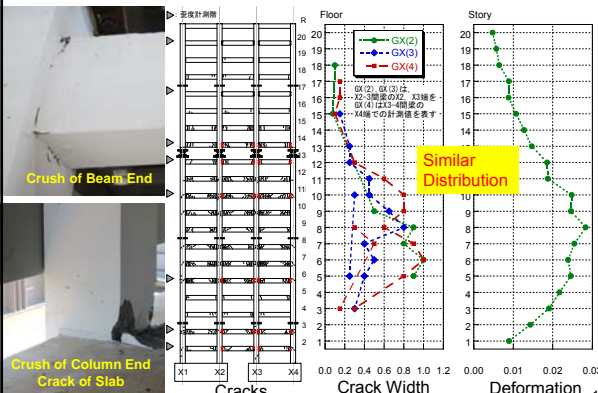

Crack of Slab

Cracks

Crack Width

Deformation

Similar Distribution

Test Results: Video (2nd Design Level)

Aug 29, 2012 16:04-13

↑11F ↓6F

CASE #2-6 E-DEFENSEC実施

最上階: 最大応答変位20mm

発生時間100秒

Test Results: Video (Over-Design Level)

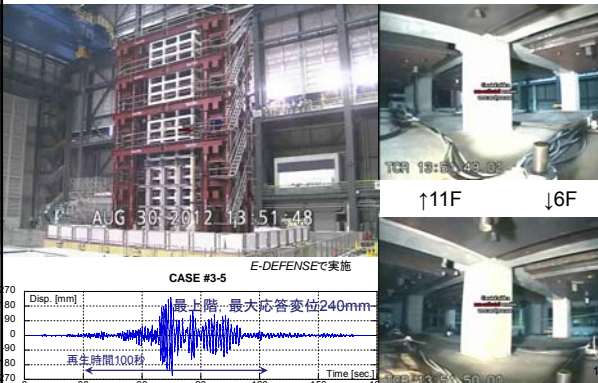

Aug 30, 2012 13:51-48

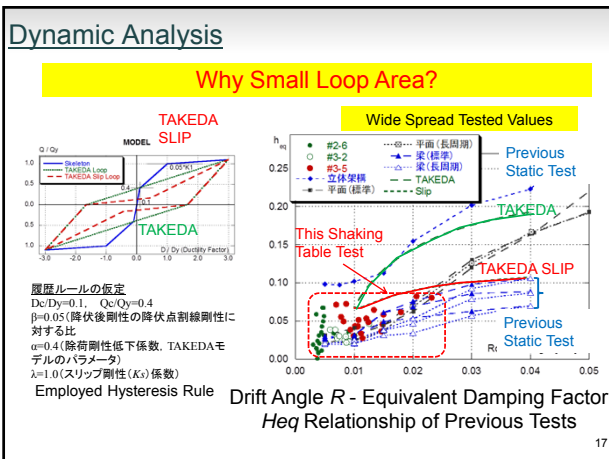

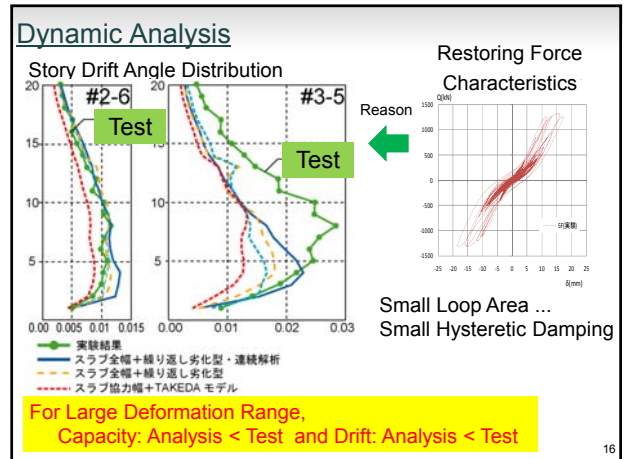

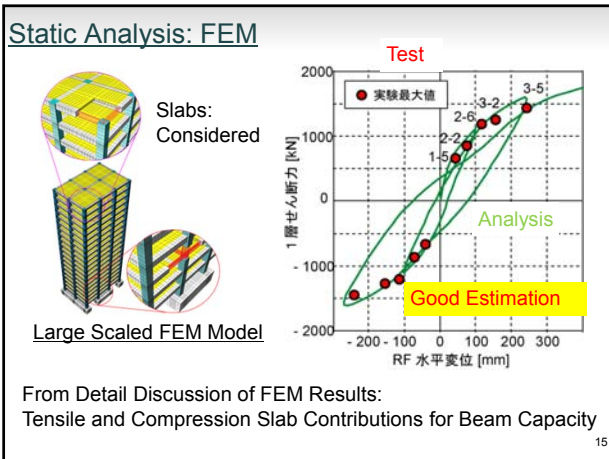

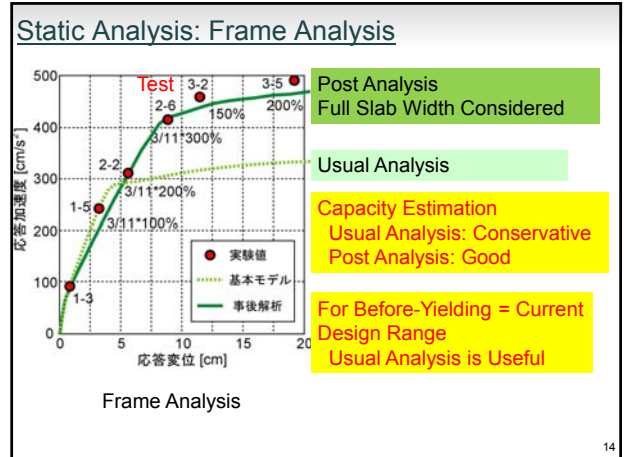

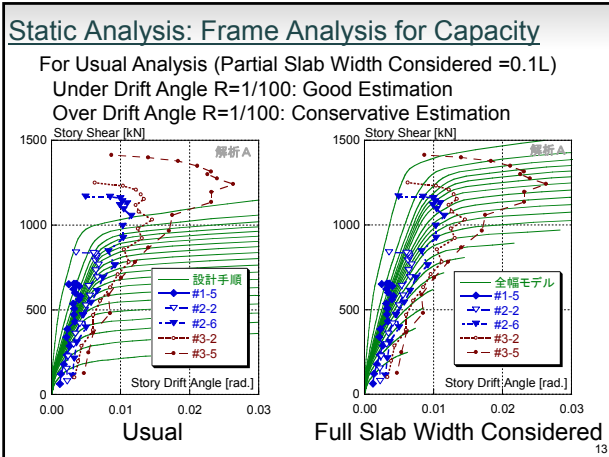

↑11F ↓6F

CASE #3-5 E-DEFENSEC実施

最上階: 最大応答変位240mm

発生時間100秒

Conclusion

- 1. Test**
 - Shaking Table Test of 1/4 Scaled and 20 Storied Reinforced Concrete Building
 - Long Period and Long Duration Ground Motions
 - Maximum Response Story Drift Angle R of 1/35
- 2. Analysis**
 - Good Evaluation through Current Analysis Methods for **Small to Medium Response**
 - Insufficient Evaluation for **Large Response**
 - Slab Contribution** and **Hysteretic Damping** are Discussed

Contents of Topic 2

Many Stuffs for This Test

19

Program

◆Outline

Shaking Table Test for Grasping Collapse Behavior of Typical RC Buildings Locating in Japanese Usual Urban Area

◆Specimen

Scale: 30% (1/3.33)
 Weight: almost 320ton (Stub:120t)
 Elevation: 6 Story (Story Height: 900mm, Total Height: almost 6.5m)
 Plan: 3 × 2 Spans (Span Length: 1.8m)
 Concrete: Fc30, Rebar: SD295 and SD345

試験体

Specimen

◆Plan

Major Concerning Axis (Wall Direction)

耐震壁 (EW60)
 独立柱
 耐震壁 (EW90)
 独立柱
 耐震壁 (EW60)

雑壁 (スリット・開口)
 Y1 Y3 Y4

雑壁 (スリット・開口)
 Y1 Y3 Y4

連層耐震壁 (EW54)

1F 1800 1800

2~6F (Standard Floor) 1800 1800

21

Specimen

◆Elevation (Transverse)

Major Concerning Axis (Wall Direction)

Outside (X1, X4 通り)
 2~6F: 3-Slits Wall
 1F: Shear Wall

Inside (X2 通り)
 2~6F: Shear Wall
 1F: Shear Wall + Column

Inside (X3 通り)

22

Specimen

◆Elevation (Longitudinal) ◆Member Section

標準的柱断面: 3C1 (226x196), 3G1 (240x150)

1階独立柱 (連層耐震壁直下): 1C1A (226x226)

耐震壁枠梁: 3G2, 3G3 (226x180), 106 (106x180)

23

Shaking Program

◆Input Wave

Compressed by Similarity Law
 JMA Kobe (Rotated)
 JR Takatori (for Last Run)

加速度 [gal]
 836gal
 543gal

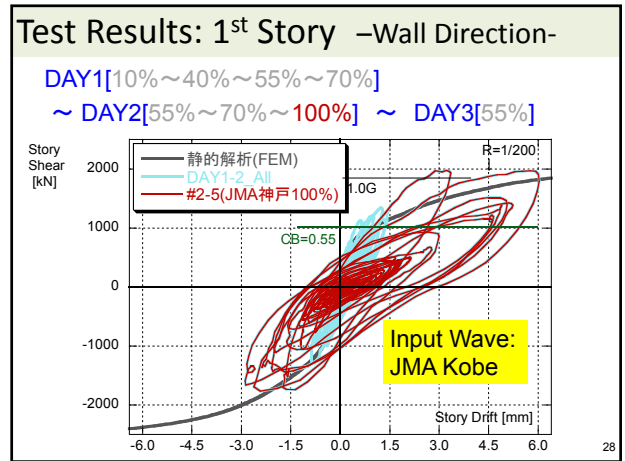

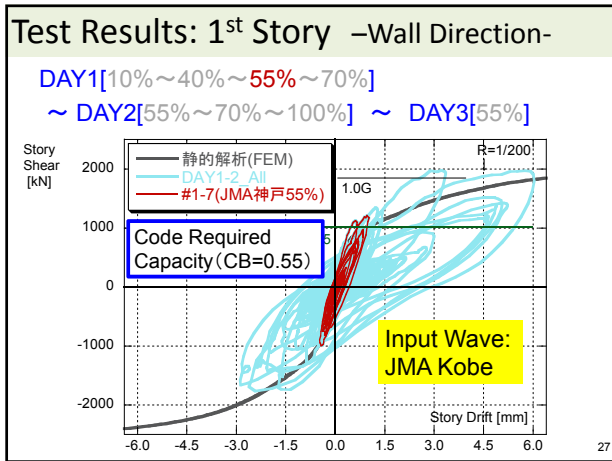

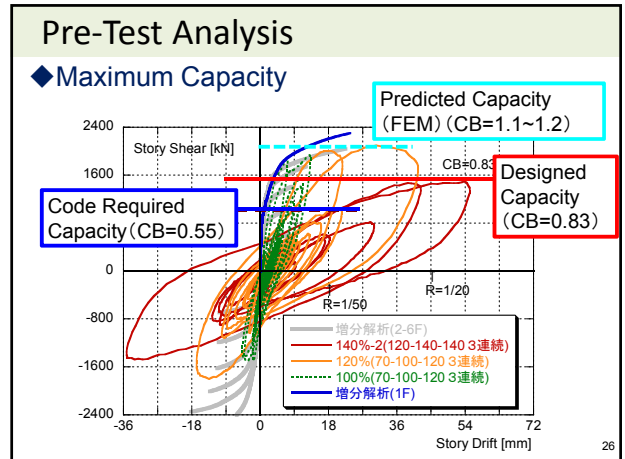

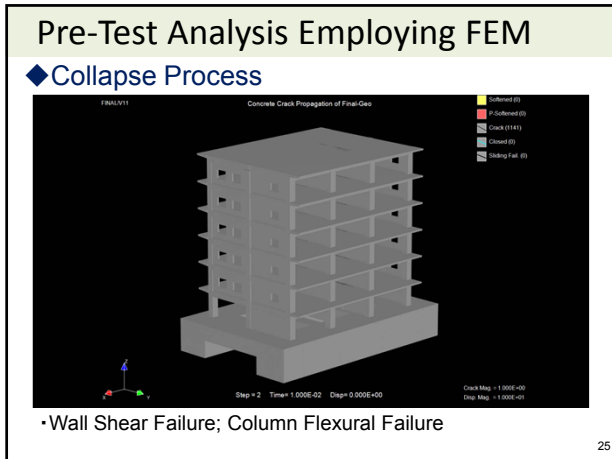

Y-Axis (Main)
 X-Axis (Stub)

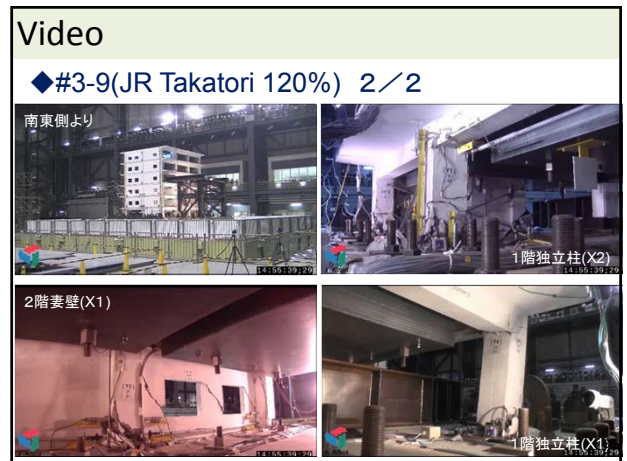

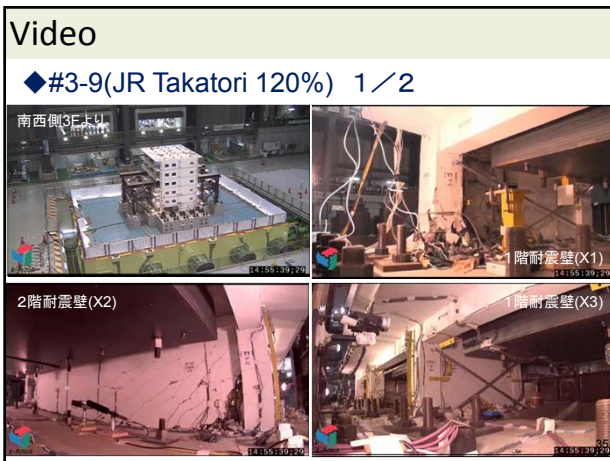

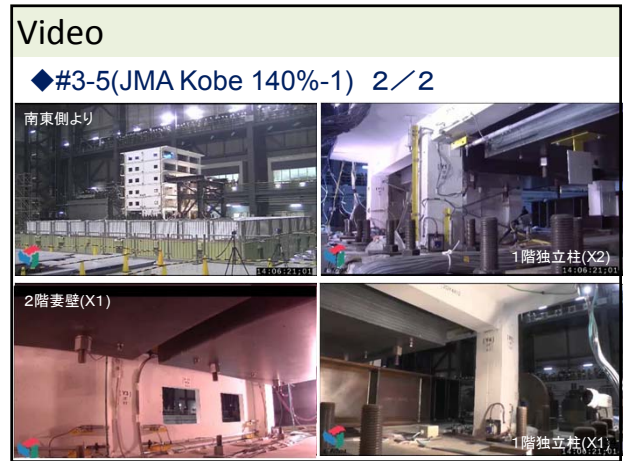

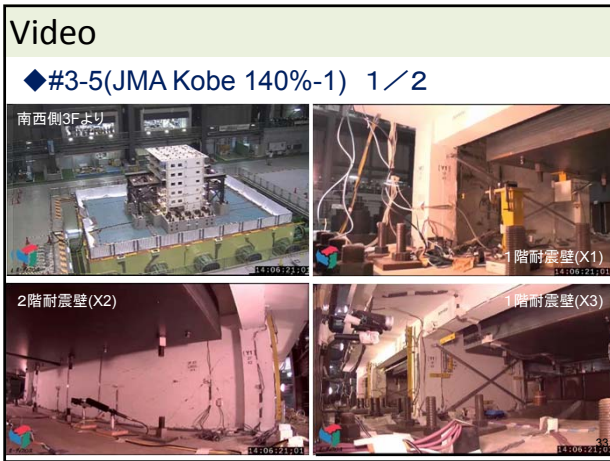

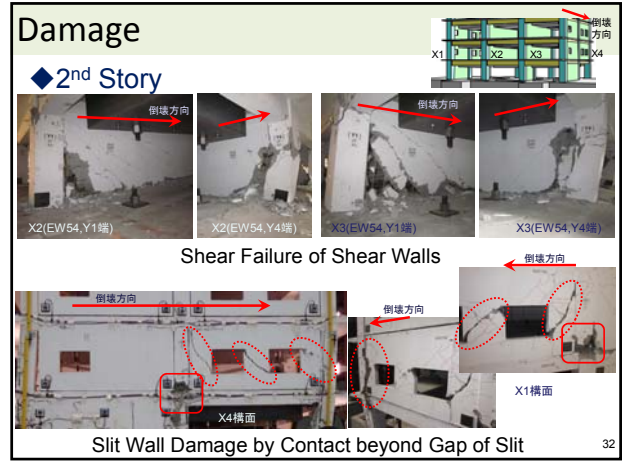

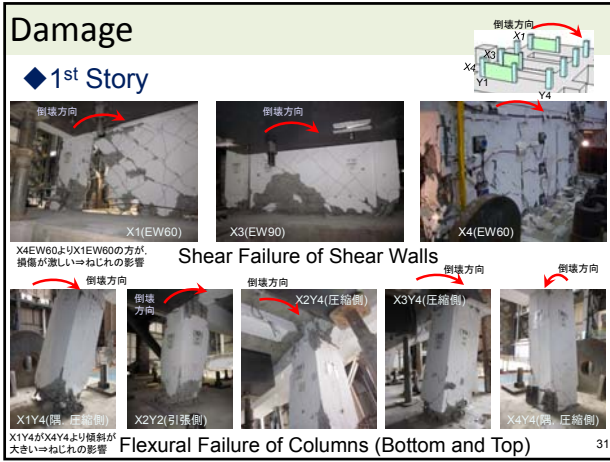

South
 West
 North

Time History of JMA Kobe
 時間 [sec.]

Aim of Rotation: Severe Input of Concerning Axis (Wall Direction)

24

Conclusion

For code-required level of input motion,
damage of the structure is slight, and
continuous use is available.

For repeated inputs before maximum capacity,
deterioration of structural performance is slight.

Test value of maximum capacity is
almost twice of code-required level.

Collapse process during earthquakes is well grasped,
acquiring a lot of physical and mechanical data.

Pre-test analysis by FEM can predict
over-all behavior of the specimen
